Challenges

After working with multiple EHR systems throughout his career, Dr. Bruce Bullock understood the operational and clinical challenges that come with enterprise technology. As Marble Valley Healthworks grew across multiple locations, the practice needed a system that could support efficient patient care while providing the visibility and flexibility required to manage an independent healthcare organization.

Solutions

For more than 7 years, medent has served as the foundation for Marble Valley Healthworks. The all-in-one platform lets the organization manage multiple locations, access patient information at the point of care and use data to support quality improvement efforts. Recent innovations, including Ambient Listening powered by Suki, have further enhanced the clinical experience by allowing Dr. Bullock to focus more fully on patients during visits.

medent allows me to optimize relationships with my patients. And as a business tool for independent practice, it's so much better than what we had in the past.

Benefits

1

More Meaningful Patient Relationships

medent's Ambient Listening reduces documentation burden, letting Dr. Bullock to focus on patients instead of the screen.

2

Smarter Practice Management

medent provides visibility across providers, locations and practice operations, helping organizations manage both clinical and financial performance.

3

Continuous Improvement Through Collaboration

medent's commitment to improving the product and healthcare experience has helped foster a long-term partnership built on collaboration and innovation.
